Unit Dimensions and Square Footage: There are two generally accepted methods of measuring the boundaries of such as residential condominiums. The first method is based on the description of the boundaries of the Unit, as set forth in Section 22 of the Declaration of Condominium, and generally only includes the space within the Unit (the "Engineering Method"). The other method, which is customarily used in sales brochures, generally measures the Unit to the outside finished surface of exterior walls and to the centerline of exterior walls, include portions of the adjacent Common Elements (the "Architectural Method"). The estimated square footage of the Unit, as determined under the Architectural Method, will be greater than the estimated square footage as determined under the Engineering Method. The Architectural Method is generally used in sales materials and may be provided to show a prospective buyer to compare the Unit with units in other condominium projects. But under the method of measurement.
